

INDUSTRY OVERVIEW

# INDUSTRY

## CYBER SECURITY

StevenDouglas is meeting the needs of our clients and the market by expanding our fully dedicated and specialized Cybersecurity Search team. Rapid changes in Security technologies make it more challenging to attract and retain highly skilled IT professionals with specialized skills in multiple Cybersecurity verticals.

The StevenDouglas Cybersecurity Search division works nationally placing human capital across the following specialties: penetration-testers, CISSP's, certified ethical hackers' identity & access management, threat & vulnerability, and InfoSec business development professionals. There's also established relationships placing mainstream Cybersecurity roles, such as architects, analysts, engineers, developers, sales exec's and chief Cybersecurity officers to service the resourcing needs of any size company.
